

**NAME**

curl\_multi\_setopt – set options for a curl multi handle

**SYNOPSIS**

```
#include <curl/curl.h>
```

```
CURLMcode curl_multi_setopt(CURLM * multi_handle, CURLMoption option, param);
```

**DESCRIPTION**

curl\_multi\_setopt() is used to tell a libcurl multi handle how to behave. By using the appropriate options to *curl\_multi\_setopt(3)*, you can change libcurl's behaviour when using that multi handle. All options are set with the *option* followed by the parameter
