User Guide

Appendix B.
Counters Reference

There are

Query Attributes

Table 3. NvPmApiQuery Output

NAME	ID	TYPE	HINT	PERF_DOMAIN	API_DOMAIN	

Simplified Experiments (SimExp)

Table 5 lists the Simplified Experiments.

Querying Counter Attributes

The counter name and unCounterID can be used to query additional counter attributes.

CounterIDs are only guaranteed to be consecutive. The section Enumerating Available Counters

The caller is responsible to force CPU/GPU synchronize before calling EndObject. Failure to flush the work will result in an error from EndObject.
