libcurl and how to use it.

Run 'curl-config --libs' to get the (additional) linker options you need to link with the particular version of libcurl you've installed. See the *curl-config(1)* man page for further details.

Unix-like operating system that ship libcurl as part of their distributions often don't provide the curl-config tool, but simply install the library and headers in the common path for this purpose.

LIBCURL SYMBOL NAMES

program is again only one thread and after its last use of libcurl.

You can call both of these multiple times, as long as all calls meet these requirements and the number of calls to each is the same.

It isn't a
